

[name of business] is pleased to announce a new concrete delivery service specializing in rapid delivery and small order using a Cemen Tech volumetric concrete mixer.

This unique concept employs the latest technology for job-site concrete and is ideally suited to the small contractor or do-it-yourselfer. [name of business] carries all the materials separately on their truck for producing concrete of any desired specification on the job. The same truckload of materials can serve different requirements, as none of the material mixes until you're ready to pour concrete. All proportioning and mixing are automatic, providing truly fresh material by simply pulling a lever or pressing a button. Unloading is quick, dispensing a cubic yard in as little as five minutes. Each delivery is precisely metered — the customer only pays for what's needed — by volume order or by the volume actually used. Add or subtract water, accelerators, and plasticizers to suit — even as the mixer is operating.

The Cemen Tech volumetric concrete mixer is compact, maneuverable, and quick. There's no waiting for the huge drum truck. [name of business] arrives on schedule and dispenses exactly what's needed as needed.
