Cemen Tech and Dobbs Equipment Expand Partnership to Serve South Carolina Market

Indianola, Iowa. August 08, 2024: [Cemen Tech](#), the world's largest volumetric concrete mixer manufacturer, announces a new agreement with [Dobbs Equipment](#) to be the exclusive dealer of the company's full line of concrete production solutions in South Carolina. This update expands the pair's existing partnership in the central and south Florida markets.

"Having Cemen Tech in the Dobbs Equipment product lineup supports our commitment to best serve the needs of our customers with cutting-edge technology and top-quality equipment so they can build successful and profitable businesses," said said Matt Murphy, Dobbs Equipment President of South Carolina.

Streamlining the complexity of concrete projects in the construction industry, volumetric concrete mixers ensure precision in measuring, mixing and dispensing concrete from a single unit. Each ingredient – sand, stone, cement powder, water, additives – is stored in separate compartments and mixed at the job site for fresh concrete every time. The flexibility and efficiency of this technology not only reduce downtime and material waste, but empowers business owners to build their bottom line by producing their own concrete.

"We understand that the availability and cost of concrete can be pain points for contractors, often hindering projects from staying on schedule and on budget. Volumetric technology mitigates these issues and allows contractors to broaden and diversify their business," said Connor Deering, CEO and President of Cemen Tech. "Like Cemen Tech, Dobbs Equipment stands behind its reputation for quality, service and support, making them a trusted and proven partner."

Visit [CemenTech.com](https://www.CemenTech.com) to find a Cemen Tech dealer and for more information about the company's line of volumetric concrete production solutions.

About Dobbs Equipment
